DATE MAILED: 01/24/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/002,062

Applicant(s)

SIMPSON ET AL.

Examiner

William S. Powers

Art Unit

2134

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 07 November 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-22 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-22 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 30 October 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

The Amendment, and remarks therein, received on 11/07/2005 have been entered and carefully considered.

The Amendment introduces a new limitation into the independent claims 1 and 12. The newly introduced limitation has required a new search and consideration of the pending claims. The new search has resulted in newly discovered prior art. New grounds of rejection based on the newly discovered prior art follow below.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-10, 12-16 and 18-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,721,908 to Lagarde et al. (hereinafter Lagarde) in view of U.S. Patent No. 6,151,675 to Smith in further view of U.S. Patent No. 6,134,325 to Vanstone et al. (hereinafter Vanstone).

Regarding claims 1, 12 and 18, Lagarde et al provides a browser to access a Web service and download content (column 9, lines 10-11; column 10, lines 16-20), retrieves image data under the control of the browser (column 5, lines 16-24), uses password authorizations and obtaining "information from confidential source[s]" (column 10, lines 53-56), but does not, specifically, disclose the use of public/private encryption, encrypting data, transmitting of said encrypted data or decrypting said encrypted data.

Smith teaches that the client downloads the public key from the server, encrypts the data, transmits said encrypted data to said server and said server decrypts said data using private key counterpart to said public key (column 6, lines 27-39) in order to effect secure document delivery. However, Smith does not expressly mention that the public key is downloaded from the intended recipient.

Vanstone teaches downloading of the public key of the recipient to the sender so that the sender can transmit data encrypted with the public key of the recipient to the recipient (column 2, lines 46-53 and coulumn 3, lines 1-14) in order that the data remains secure and can only be decrypted by the recipient's private key (column 1, lines 7-14).

Therefore, it would be obvious to one of ordinary skill in the art at the time the invention was made to implement the invention of Lagarde et al with the security features disclosed by Smith to ensure secure data transmission to the web service and the transfer of the recipient's public key from the recipient to the sender in order that the data remains secure and can only be decrypted by the recipient's private key (column 1, lines 7-14).

Regarding claim 18, since claim 18 recites a system that performs the same method steps of claim 1 with the addition of a data path, which is disclosed by Lagarde (column 9, lines 2-6), the rejection is applied.

Regarding claims 2 and 13, Lagarde discloses retrieved data that is associated with user's identity (column 5, lines 13-24).

Regarding claims 3, 14 and 18 Lagarde discloses the destination web service represents a production device (column 15, lines 15-22).

Regarding claims 4 and 19, Lagarde discloses the production device is a printer (column 15, lines 15-22).

Regarding claim 5, Lagarde discloses a method whereby the web service has restricted access to user's data (column 12, lines 29-39).

Regarding claim 6, Lagarde and Smith do not disclose a hard disk.

Official Notice is given that it is well known that modern computer systems employ hard disks as secondary memory.

Therefore, it would be obvious to one of ordinary skill in the art at the time the invention was made to implement Lagarde and Smith using a hard disk for secondary memory.

Regarding claim 7, Lagarde discloses various document forms including BMP and GIF files, but PDF is not mentioned, specifically (column 17-18, lines 56-67 and 1-3).

Smith teaches, by way of example, securely transmitting a PDF file over the network (column 5, lines 46-56).

Therefore, it would be obvious to one of ordinary skill in the art at the time the invention was made to implement the invention of Lagarde with the PDF format document disclosed by Smith.

Regarding claims 8 and 15, Lagarde discloses options presented by the destination web service for the user to choose according to his/her needs (column 10, lines 37-41).

Regarding claims 9 and 16, Lagarde discloses printing and/or producing results of the user's options (column 15, lines 15-22).

Regarding claim 10, Lagarde discloses printing reports reflecting user's desired options (column 14-15, lines 62-67 and 1-32).

Regarding claim 20, Lagarde discloses hard wired and wireless data paths (column 9, lines 18-26).

Regarding claim 21, Lagarde in view of Smith disclose a public encryption key (Smith, column 4, lines 45-51).

2. Claims 11, 17 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,721,908 to Lagarde et al in view of U.S. Patent No. 6,151,675 to Smith in further view of Applied Cryptography by Bruce Schneier.

Lagarde and Smith teach security measures, but do not, specifically, disclose the use of a session key.

Schneier teaches "a hybrid cryptosystem" (page 33, 5th paragraph) wherein a session key is generated that encrypts the data, uses the public key to encrypt the session key and sends the session key and data to the destination where the private

key counterpart decrypts the session key and the session key decrypts the data (page 33, paragraphs 6-9) in order to more effectively use the computer system resources.

Therefore, it would be obvious to one of ordinary skill in the art at the time of the invention was made to institute the session key encryption scheme, as disclosed by Schneier, as this better utilizes computer resources.

Response to Arguments

3. Applicant's arguments filed 11/07/2005 have been fully considered but they are not persuasive.

In response to applicant's arguments against the references individually (Smith and Lagarde) in sections 2a, 2c and 2e, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986). Lagarde clearly teaches the use of a World Wide Web browser on the Internet (Lagarde, Abstract).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent No. 6,438,594 to Bowman-Amuah discloses delivering services via a locally addressable interface.

U.S. Patent No. 6,144,997 to Lamming et al discloses a system for accessing and distributing electronic documents.

U.S. Patent No. 6,105,131 to Carroll discloses a secure distributed information system.

U.S. Patent No. 6,718,535 to Underwood discloses a network for the distribution of services.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William S. Powers whose telephone number is 751 272 8573. The examiner can normally be reached on m-f 7:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Albert Decady can be reached at 571 272 3819. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
